

TONKA WATER, A U.S. WATER BRAND

TONKA WATER EXPERTISE

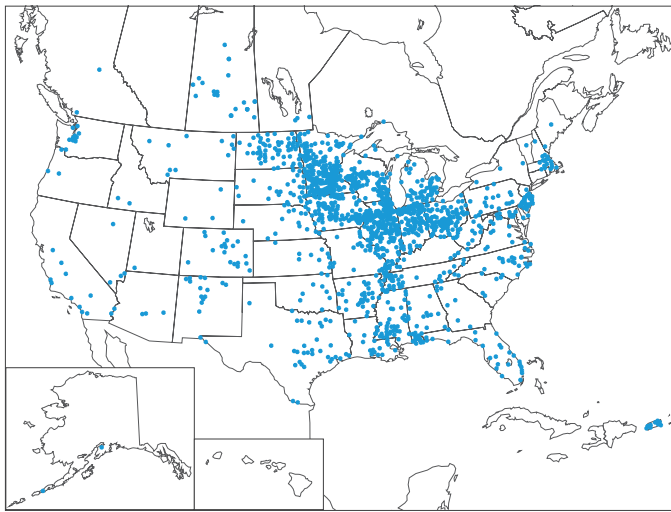

- Water and wastewater (polishing and reuse)
- Surface water and groundwater
- Small (50 gpm) to large (50MGD) systems
- System design, manufacture, start-up, train, support, and warranty
- Custom designs to meet specific application requirements

Trusted Systems. Resourceful Thinking.

Tonka Water, a U.S. Water Brand, has been the leader in customized water treatment solutions since 1956. We have installed more than 2,400 individually designed water treatment systems across North America. In 2017, Tonka Water was acquired by U.S. Water Services, Inc. (U.S. Water) headquartered in St. Michael, MN. We provide industrial and municipal water treatment systems combining chemicals, equipment, engineering and services. Our systems are used for groundwater, surface water, and wastewater applications. Our mission is to be universally recognized as the most innovative and flexible provider in the marketplace by focusing on safe, economical and environmentally sound solutions.

Tonka Water's design and engineering capabilities have expanded over the years and led to projects of increasing sophistication. Its systems are comprised of a broad line of treatment equipment, including solids contact basins, clarifiers, gravity filters, pressure filters, packaged treatment systems, aerators, ion exchange systems, VOC stripping towers, cross flow membranes and other system components. Processes include removal of arsenic, radium, total dissolved solids, disinfection byproduct precursors and color.

Tonka Water Guarantee

Tonka Water provides the best custom manufactured water treatment systems in the industry. Our people will deliver excellent service and support for your project from conceptual and cost-effective design, to construction and commissioning; and throughout the system warranty and operational life of the project.

Thousands of quality water treatment installations since 1956.

Tonka Water custom designs each system and contracts for the manufacture of the tanks and vessels by fabrication shops with which it has long-term relationships. Most of the internal components of its systems are manufactured and assembled at Tonka Water's facilities in Minnesota, and Tonka Water coordinates the procurement and delivery of the total system.

Our commitment to quality begins early by understanding our customers' requirements and meeting their unique application needs. Our quality management system (ISO 9001:2008) is infused throughout our internal processes; from project planning, fabrication and inspection, to our experienced on-site field service professionals, all striving to meet our customers' expectations with every project.
