DDS
Drive your best flow decisions.
All-Inclusive Flow Monitoring Solution

Your team needs a clear view into your collection system’s health. DDS can help.

Your work supports a safe collection system infrastructure and healthy community. Hach® Data Delivery Services solutions can help you make your best data-driven decisions.

Our all-inclusive, fixed-cost DDS flow monitoring packages give you all the equipment you need and round-the-clock access to data you can share and act on.

✨ Choose DDS for: I&I remediation projects, CSO/SSO projects, sewer system modeling, meeting consent decree requirements and more.

Discover DDS.

See opportunities and know your flow data with Hach’s Data Delivery Services.

**What you get with DDS:**

- Real-time access to data for analysis
- Data access from anywhere
- Instant alerts about flow changes
- Hach engineer-reviewed data
- Dedicated Hach support team
- Fixed-cost, all-inclusive packages scale to suit your project needs
Trust your data.

Be confident in your decision-making with DDS. You’ll have 24-hour data access with a 95% raw data up-time guarantee. The bonus: your data is reviewed by our engineers, so you’ll have nearly a century of Hach water quality expertise on your side.

Access industry-leading sensor technology.

DDS is powered by our extensive suite of sensor technologies. Hach technology experts will help you explore flexible sensor options to customize a flow solution that will suit your applications and location. So, whether your project needs non-contact, submersed, or level-only sensors, there’s a DDS sensor package for you.
It takes a team.

No matter what size your flow project is, our dedicated DDS team is there for you.

Hach data analysts, engineers and project managers combine expertise and skills to help you achieve your goals and manage your projects on time, within budget and to meet all compliance regulations. Meet your team! They’re here to help you.

**Project Manager**

Serves as a single-point contact for all project needs. Complete project oversight including project setup, field service, project performance, and ensuring uptime.

**Field Service Team**

Manages setup for new contracts. Advises customers about how to access data. Conducts post-install topside work (batteries, sensor swaps, antennas).

**Tech Support**

Answers customer questions about programming equipment, troubleshooting, calibrating and data analysis. Runs daily and monthly site reports. Processes service requests and invoicing.

**Project Engineer**

Oversees data quality after install and maintains data quality throughout the project. Produces “model-ready” data-sets and generates data analysis reports. Reviews the hydraulic functioning of sensors. Responds to customer’s hydraulic-related questions.

**Data Analyst**

“I am a data engineer and your Hach DDS partner. I always have eyes on your data so I can help you get ahead of potential challenges.”

- Emily, P.E.
Project power.

Whether you’re doing an I&I remediation or SSO project, we’ve got the tools and support you need.

DDS gives you leading-edge tools, actionable data and access to flexible sensor options to suit any project application. Your project is handled from start to end by the DDS project team. Skilled service technicians install and maintain our powerful monitoring systems, combining wireless data with the right sensors for your project and location.

Depend on state-of-the-art flow monitoring equipment.
All equipment is included in the monthly cost. Never worry about your equipment becoming obsolete. We’ll handle all repairs and replacement costs if your equipment is fouled or malfunctions in any way.

Scale DDS to fit your needs.
Choose one flow meter or several hundred. Hach DDS is available at the scale you need to fit your unique project requirements.

Know your flow status anytime, anywhere.
All metered locations can be programmed to send text or email alerts. Set alarms for any measurement.

Harness the power of real-time data.
Hach DDS includes FSDATA Online Data Manager, a cloud-based software that allows you to view your collection systems’ response to weather events or improvement projects in real-time on your computer or digital device.
